Remote Control Encoder PT2262

Description

PT2262 is a remote control encoder paired with PT2272 utilizing CMOS Technology. It encodes data and address pins into a serial coded waveform suitable for RF or IR modulation. PT2262 has a maximum of 12 bits of tri-state address pins providing up to 531,441 (or 3¹²) address codes; thereby, drastically reducing any code collision and unauthorized code scanning possibilities.

Features

CMOS Technology
 Low Power Consumption
 Very High Noise Immunity

☐ Up to 12 Tri-State Code Address Pins

☐ Up to 6 Data Pins

 \square Wide Range of Operating Voltage: $Vcc = 4 \sim 15 \text{ Volts}$

☐ Single Resistor Oscillator

☐ Latch or Momentary Output Type

☐ Available in DIP and SO Package

Applications

	Car	Security	System
_			(\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\

☐ Garage Door Controller

☐ Remote Control Fan

☐ Home Security/Automation System

☐ Remote Control Toys

☐ Remote Control for Industrial Use

Functional Description

PT2262 encodes the code address and data set at A0 \sim A5 and A6/D5 \sim A11/D0 into a special waveform and outputs it to the DOUT when TE is pulled to "0" (Low State). This waveform is fed to either the RF modulator or the IR transmitter for transmission. The transmitted radio frequency or infrared ray is received by the RF demodulator or IR receiver and reshaped to the special waveform. PT2272 is then used to decode the waveform and set the corresponding output pin(s). Thus completing a remote control encoding and decoding function.

PT2262

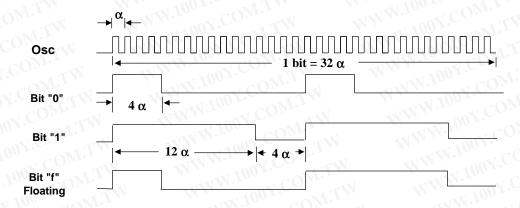

RF Operation

Code Bits

A Code Bit is the basic component of the encoded waveform, and can be classified as either an *AD* (*Address/Data*) *Bit* or a *SYNC* (*Synchronous*) *Bit*.

Address/Data (AD) Bit Waveform

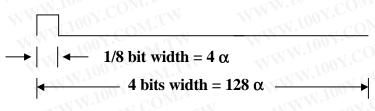

An AD Bit can be designated as Bit "0", "1" or "f" if it is in low, high or floating state respectively. One bit waveform consists of 2 pulse cycles. Each pulse cycle has 16 oscillating time periods. For further details, please refer to the diagram below:

where: \alpha = Oscillating Clock Period

Synchronous (Sync.) Bit Waveform

The Synchronous Bit Waveform is 4 bits long with 1/8 bit width pulse. Please refer to the diagram below:

勝 特 力 材 料 886-3-5753170 胜特力电子(上海) 86-21-54151736 胜特力电子(深圳) 86-755-83298787 Http://www.100y.com.tw

Note: $1 \text{ bit} = 32 \alpha$

Code Word

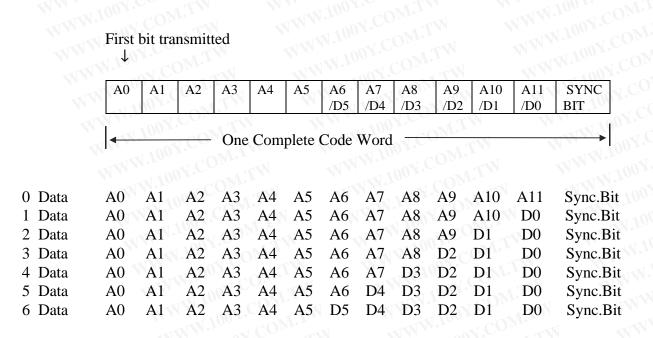

勝 特 力 材 料 886-3-5753170 胜特力电子(上海) 86-21-54151736 胜特力电子(深圳) 86-755-83298787 Http://www.100y.com.tw

A group of Code Bits is called a Code Word. A Code Word consists of 12 AD bits followed by one Sync Bit. The 12 AD bits are determined by the corresponding states of A0 \sim A5 and A6/D5 \sim A11/D0 pins at the time of transmission. When Data Type of PT2262 is used, the address bits will decrease accordingly.

For example: In the 3 Data Type where the address has nine (9) bits, the transmitting format is:

PT2262 / PT2272 has a maximum of twelve (12) Address Bits including the six (6) Address/Data bits. The following diagram shows the code bits with their corresponding pins.

Tel: 886-2-29162151 Fax: 886-2-29174598 URL: http://www.princeton.com.tw

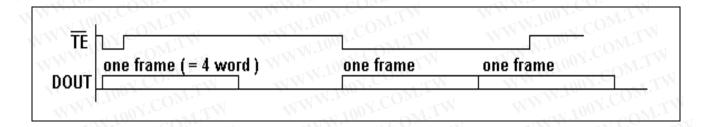

Remote Control Encoder

PT2262

The Code Bits A0 \sim A5 and A6/D5 \sim A11/D0 are determined by the states of A0 \sim A5 and A6/D5 \sim A11/D0 pins. For example, when the A0 (Pin No. 1) is set to "1" (Vcc), the Code Bit A0 is synthesized as "1" bit. In the same manner, when it (A0 Pin) is set to "0" (Vss) or left floating, the Code Bit A0 is synthesized as a "0" or "f" bit respectively.

Code Frame

A Code Frame consists of four (4) continuous <u>Code</u> Words. When PT2262 detects "0" on the <u>TE</u> (meaning, the <u>TE</u> is active "low"), it outputs a Code Frame at DOUT. If <u>TE</u> is still active at the time the Code Frame transmission ends, PT2262 outputs another Code Frame. It should be noted that the Code Frame is synthesized at the time of transmission.

Single Resistor Oscillator

The built—in oscillator circuitry of PT2262 allows a precision oscillator to be constructed by connecting an external resistor between OSC1 and OSC2 pins. For PT2272 to decode correctly the received waveform, the oscillator frequency of PT2272 must be 2.5 ~ 8 times that of transmitting PT2262. The typical oscillator frequency with various resistor values for both PT2262 and PT2272 are shown below:

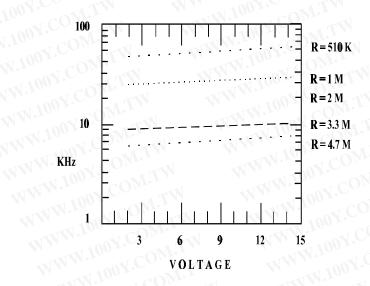

Tel: 886-2-29162151 Fax: 886-2-29174598 URL: http://www.princeton.com.tw

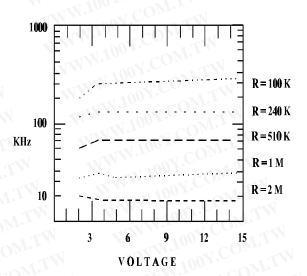

Remote Control Encoder

PT2262

Encoder OSC Frequency

Decoder OSC Frequency

Suggested oscillator resistor values are shown below.

PT2262	PT2272
4.7 ΜΩ	820 KΩ*
$3.3~\mathrm{M}\Omega$	680 KΩ*
1.2 ΜΩ	200 KΩ**

Note: * -- Operates when PT2272 's Vcc=5V to 15V

** -- Operates when PT2272's Vcc=3V to 15V

This means that if PT2272 supply voltage is lower than 5 Volts, you need to use a lower oscillator resistor value for both PT2262 and PT2272.

Remote Control Encoder

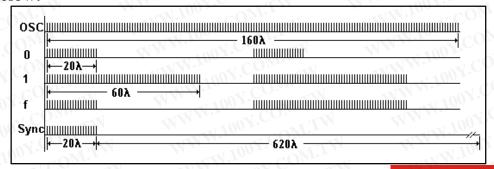

PT2262

IR Operation

In the IR Type of Operation, the functions are similar to the above descriptions except for the output waveform that has a carrier frequency of 38 KHz. Details are as follows:

Code Bits

The Code Bits are further modulated with a 38 KHz carrier frequency and can be "0", "1" or "f" bit. Their waveforms are shown in the diagram below.

Note : $\lambda = 2$ clock lengths

勝 特 力 材 料 886-3-5753170 胜特力电子(上海) 86-21-54151736 胜特力电子(深圳) 86-755-83298787 Http://www.100y.com.tw

Code Word

A Code Word is made up of code bits and the format is the same as that of the RF Code Word.

Code Frame

Likewise, a Code Frame is made up of Code Words and the format is the same as that of RF Type of Operation.

Oscillator

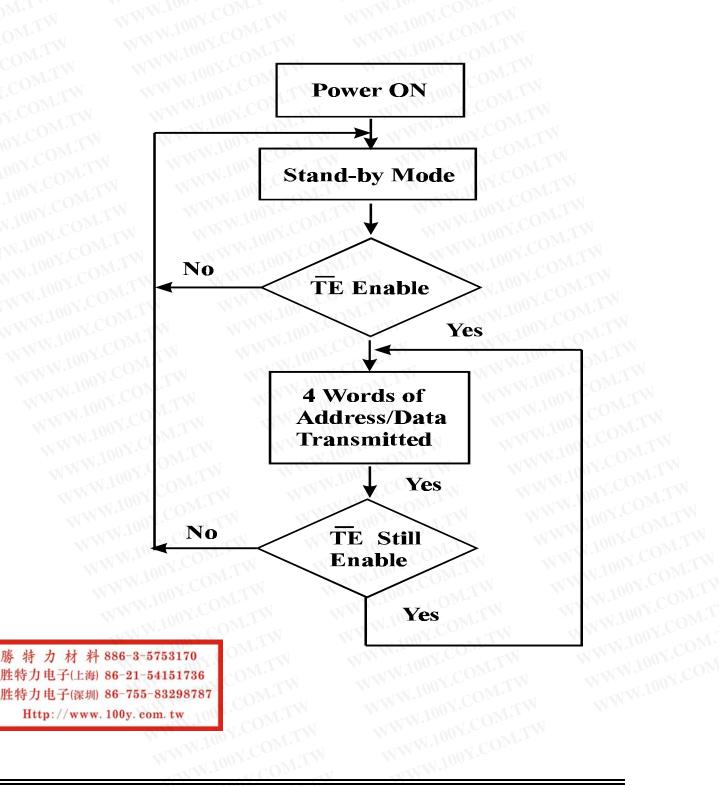

The Oscillator Frequency for the IR Type of Operation is twice the carrier frequency. Thus, the oscillator frequency should be kept at 76 kHz. A 430K $\sim 470 \text{K}\Omega$ oscillator resistor between OSC 1 and OSC 2 pins is recommended. It should be noted that the carrier is a 50% duty cycle frequency.
